BUILT FOR REAL LIFE

Hardwood strength, made to last.

K Parker makes its sliding doors in solid Meranti or Saligna hardwood. These timbers are chosen for strength and shape stability in South African conditions.

Thoughtful construction helps your door keep its form and move smoothly with everyday use.

READ MORE ON THE WEBSITE >

DETAILS THAT PROTECT

A better seal at every edge.

An aluminium bottom sill helps protect the timber from moisture and foot traffic. The jam adaptor helps the door close firmly against its frame.

Integrated weather seals help reduce draughts, dust and water ingress; the inter-locker improves closure and stability.

[READ MORE ON THE WEBSITE >](#)

COMFORT & SECURITY

Designed with care.

An interlocker and optional anti-lift lock add security. Double glazing is available for improved thermal and sound comfort on suitable designs.

K Parker says its sliding-door system has been tested against SANS 10400 and SANS 613 requirements. Ask the team to confirm specifications for your chosen door.
